

# HOME ENERGY RATING

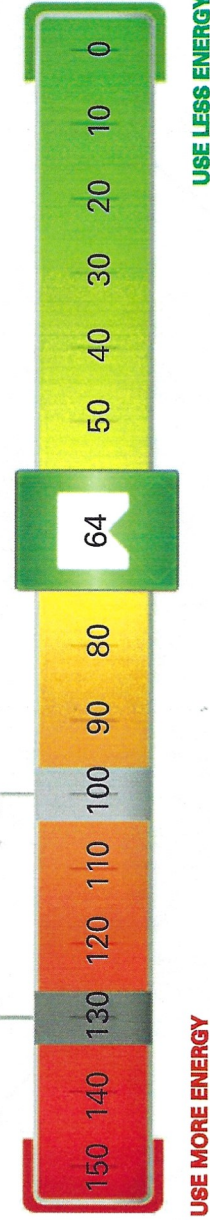

A Home Energy Rating is the projected energy performance of a home based on a review of the construction plans. A lower score on the HERS® Index scale means a more energy efficient plan.

All homes built to the *Environments For Living®* and *Environments For Living Certified Green®* program requirements are high performance homes, regardless of the level. Use the scale below to see where the construction plan for your model falls on the Home Energy Rating scale.

## HERS INDEX

Typical existing home\*\*

Typical new home\*

## HERS INDEX SCORE FOR THIS PLAN

64

The lower the rating on the scale, the more energy efficient the home.

## PLATINUM Program Level

HERS Index Score	70 or lower	Minimum Energy Efficiency Improvement Over Code Compliant Home*	30% or more
------------------	-------------	---	-------------

## ENVIRONMENTS FOR

*Environments For Living* and *Environments For Living Certified Green* are registered trademarks of Masco Home Services, Inc.

\*2006 International Energy Conservation code-compliant home \*\* Typical existing home per U.S. Department of Energy's EnergySmart Home Scale<sup>SM</sup>

The HERS Index score is a scoring system established by Residential Energy Services Network (RESNET), a third party in which a score of 100 is what a standard new home built to IECC 2006 would score, while a score of 0 is a new home that has net-zero energy use. The HERS Index score shown is calculated for the home plan as designed, not as built, using software approved by RESNET. This software assumes certain conditions and requires inputs specified by RESNET. The actual energy efficiency of your home as built, and your energy use, will vary depending on, among other things, occupancy, location, orientation, and specific as-built features and characteristics, and may be higher or lower than the HERS Index score shown above. Masco Home Services, Inc. does not guarantee the actual HERS Index score for the home as built. The HERS® Index is a registered trademark of RESNET.
