

Building smart, sustainable homes

Even though building technology has made significant progress, numerous homes are still built using conventional wood frames. Nonetheless, we have utilized modern materials such as SIP panels and metal framing to construct exceptional homes that offer advantages such as enhanced energy efficiency, sustainability, higher fire rating, and greater stability in damp conditions.

Structural Insulated Panels (SIPs)

Why build with TechPanel SIPs?

- >70% reduction in CO2
- 40% reduction in landfill waster
- >35% less energy to heat/cool
- Zero flame spread
- Non-combustible
- Anti-mold
- Anti-bacterial
- Impace and water resistant

Fire Resistant

Sustainable

Anti-Microbial

Weather Resistant

Water Resistant

CO2 Reduction

Why build with metal framing?

- Non-combustible
- Waterproof
- Mold & mildew resistant
- 100% recyclable
- Sustainable
- Recycled content 55%-75%
