

Virtual Feature Sheet Instructions

Great news! You no longer have to print out expensive feature sheets. Simply print the QR code we have provided you on any piece of paper you'd like and place it at the entrance of the property for your viewers to scan. Viewers would simply take out their smartphone and scan the QR code with their camera app, which triggers them to open the Virtual Feature Sheet web link to view all the photos, videos, 3D virtual tours, floorplans, etc, of the property. If you want to create a "call to action" element, simply write "SCAN ME", or "Virtual Feature Sheet" on top of your QR code like below:
